TIRE REPAIRS—VULCANIZED

(Passenger, Truck, and Bus Tires)

Reference book not to be
taken from the Library.

COMMERCIAL STANDARD CS110-43

Effective Date for New Production from August 20, 1943

A RECORDED VOLUNTARY STANDARD
OF THE TRADE

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON : 1943

PROMULGATION
of
COMMERCIAL STANDARD CS110-43
for
TIRE REPAIRS—VULCANIZED
(Passenger, Truck, and Bus Tires)

On October 15, 1942, at the instance of the National Association of Independent Tire Dealers, a conference of representative tire repair engineers adjusted and adopted a proposed commercial standard for tire repairs—vulcanized. The proposed standard was then submitted to a number of manufacturers, and to distributor and consumer organizations for comment, and on March 24, 1943, the adjusted draft was circulated to the entire trade for written acceptance. Those concerned have since accepted and approved the standard as shown herein for promulgation by the United States Department of Commerce, through the National Bureau of Standards.

The standard is effective for new production from August 20, 1943.

Promulgation recommended.

I. J. Fairchild,
Chief, Division of Trade Standards.

Promulgated.

Lyman J. Briggs,
Director, National Bureau of Standards.

Promulgation approved.

Jesse H. Jones,
Secretary of Commerce.

TIRE REPAIRS—VULCANIZED

(Passenger, Truck, and Bus Tires)

COMMERCIAL STANDARD CS110-43

PURPOSE

1. The purpose of this commercial standard is to provide recognized specifications for the repairing of passenger, truck, and bus tires that have sustained an injury but still have many miles of road service left; to bring about a better understanding between the user and the tire repair shop; to give the user confidence in the quality of the workmanship and methods used by the tire repair shop; to guarantee the quality of the workmanship; and to keep the tire in satisfactory condition for road service for the maximum time consistent with safety.

2. During the present war emergency, nothing in these specifications shall be construed to obstruct or interfere with the repairing of tires submitted for repairing under the rules of the Federal Government agencies empowered to regulate the tire industry as a war measure, when such tires do not meet the inspection requirements of this standard, except that vulcanized tire repairs that do not meet the requirements of this standard shall not be sold as complying with the standard.

SCOPE

3. This commercial standard covers general requirements for the inspection of the injury to the tire, the minimum acceptable condition of the tire, the method of repair for maximum service, and the recommended wording of a uniform guarantee label.

DEFINITION

4. For the purpose of this standard the term "tire repair" means the repair of an injury to the tire (passenger, truck, and bus tire) by vulcanization of new materials into the tire by one of the nationally recognized methods described herein.

REQUIREMENTS

5. *Inspection of passenger, truck and bus tires.*

5a. Inspection of the tire shall be made by a skilled operator. The tire shall be dismounted from the rim and put on a tire spreader that will open the tire wide enough between the beads for the operator to have a clear vision of the entire inside of the tire and of the tire injury.

5b. From this inspection, the operator shall determine if the tire is repairable under the following conditions .

5c. The injured part of the tire shall not exceed one-half of the cross section in maximum dimension after skiving.

5d. There shall be no ply or tread separation exceeding the dimensions established in paragraph 5c.

5e. There shall be no circumferential breaks in the cord body.

5f. Bead area must be sound with no broken wires.

5g. There shall be no radial or circumferential sidewall cracks which cannot be satisfactorily repaired.

6. *Preparation of tire for repair.*

6a. Entire tire shall be thoroughly dry.

6b. When the injury is in either the tread or sidewall, but not through the carcass, the injured part of the tread or sidewall shall be skived at a 45° angle until clean rubber is exposed. It shall then be rasped until the tread or sidewall is thoroughly roughened. The hole or injury shall then be well coated with a suitable vulcanizing cement¹ and allowed to dry until tacky.

6c. Where the injury is a fabric break on the inside, with no cut or bruise in the tread or sidewall rubber, the injured fabric shall be skived until the hole is clean and the fabric is sound around it. It shall then be buffed for a sufficient distance around the hole to permit the new repair material to be placed on clean rubber and fabric. The buffing should be done with the brush rotating along the cord toward the injury to avoid loosening the cord ends. The cleaned area shall be coated with a suitable vulcanizing cement (see footnote 1) and allowed to dry until tacky.

6d. When the injury is through either the tread or sidewall and the carcass, the tire shall be prepared as described in paragraphs 6b and 6c.

6e. The cords in rayon tires originally are covered with a special coating to assure proper union when the tires are first cured. Therefore, when buffing the inside section of a rayon tire to be repaired, care should be taken not to remove this coating. Buff only enough to provide a rough surface over the area to receive the repair, without buffing down to the bare cords. Rayon tires should be cemented immediately after buffing.

7. *Method of repair.*

7a. After the tire has been prepared, the repair shall be built up according to the instructions in any one of the following manuals or others issued by a supplier of repair material and approved by the standing committee: Manual of Tire Repairing, fifth edition; Tire Repair and Retread Manual No. S, 4112; and Tire Repair and Conservation Manual. These manuals may be obtained from suppliers of repair material.²

8. *Curing equipment.*—Curing equipment shall have uniform temperature characteristics and positive temperature control. Molds shall be provided with thermometers accurate to within $\pm 2^{\circ}\text{F}$. They shall be so designed as to cure repairs in tires without damaging distortion.

9. *Curing temperature.*—Curing temperature, time, and pressure shall follow accurately mold and rubber manufacturers' directions. A correlation between the curing characteristics of the repair materials and the heating characteristics of the mold is necessary.

¹ The cement, unless otherwise specified by Government restrictions, shall be of the quality purchased by the U. S. Army, as follows: The cement shall contain not less than 0.55 pound of crude rubber per gallon of cement and shall contain no reclaim.

² A list of repair material manufacturers who have agreed to supply one of these manuals may be obtained from the Division of Trade Standards, National Bureau of Standards, Washington, D. C.

GUARANTEE LABEL

10. Repairs guaranteed to be in conformance with this commercial standard shall be made only on tires which pass the inspection requirements. Such vulcanized repairs are guaranteed to prove satisfactory during the remaining life of the tread.

11. It is recommended that the following statement or its equivalent be included in contracts, invoices, advertising, and on labels or tags attached to tires that have had vulcanized repairs.

The _____ guarantees that the vulcan-
 ized repair completed _____ in this _____ tire, _____
 _____ (tire repair shop) _____ (date) _____ (make) _____ (serial number)
 located approximately _____ inches to the _____ of the serial
 _____ (direction—right or left)
 number conforms to Commercial Standard CS110-43 as issued by
 the National Bureau of Standards.

EFFECTIVE DATE

The standard is effective for new production from August 20, 1943.

12. Figure 1 illustrates the use of an abbreviated guarantee statement on labels of the National Institute of Treading Standards, and adopted for its members' use.

Equipment Manufacturers:

J. C. HEINTZ, James C. Heintz & Co., 3738-46 W. 143d Street, Cleveland, Ohio.
ED GLYNN, Super Mold Corporation, Lodi, Calif.

Tire Repair Shops:

IRA SHULL, Shull & Phillips, 1251 E. 8th St., Los Angeles 12, Calif.
STANLEY CARNELL, Carnell & Bradburn, 22d & Market Streets, Philadelphia, Pa.
DEAN ZOOK, The Zook Tire Co., 1122 Broadway, Denver, Colo.

Consumer and General Interest Organizations:

W. A. DUVAL, Greyhound Corporation, 2600 Board of Trade Building, Chicago, Ill. (Representing National Association of Motor Bus Operators).
LYNWOOD ELLIOTT, United Parcel Service, 2320 Walnut Street, Philadelphia, Pa. (Representing National Association of Purchasing Agents).

WALTER W. BELSON, American Trucking Association, 1424 16th St., N. W., Washington, D. C.

C. C. SIMPSON, National Association of Independent Tire Dealers Inc., 631 Pennsylvania Ave., N. W., Washington, D. C.

HISTORY OF PROJECT

On September 3, 1942, C. C. Simpson, Executive Vice President of the National Association of Independent Tire Dealers, Washington, D. C., expressed a desire for the cooperation of the National Bureau of Standards in the establishment of a commercial standard for tire repairs—vulcanized, (passenger, truck, and bus tires). This was followed by a written request from that organization on December 4, 1942. In the meantime, a proposed commercial standard was adjusted and adopted on October 15, 1942, at Akron, Ohio, by a conference of representative tire repair engineers, and a representative of the Rubber Manufacturers Association. The proposed commercial standard was circulated during the months of November and December to representative equipment manufacturers, repair material manufacturers, large tire repair shops, user associations, other interested associations, Government agencies, tire distributors, and tire manufacturers, for comment.

After some adjustments in harmony with that comment, the recommended commercial standard was circulated to all known interested organizations for acceptance on March 24, 1943, and July 20, 1943, the National Bureau of Standards announced that acceptance representing a satisfactory majority of the volume of business had been received. The commercial standard designated as CS110-43 became effective from August 20, 1943.

ACCEPTANCE OF COMMERCIAL STANDARD

If acceptance has not previously been filed, this sheet properly filled in, signed, and returned will provide for the recording of your organization as an acceptor of this commercial standard.

Date

Division of Trade Standards,
National Bureau of Standards,
Washington, D. C.

Gentlemen:

Having considered the statements on the reverse side of this sheet, we accept the Commercial Standard CS110-43 as our standard of practice in the

Production ¹ Distribution ¹ Testing ¹ Use ¹

of tire repairs—vulcanized (passenger, truck, and bus tires).

We will assist in securing its general recognition and use, and will cooperate with the standing committee to effect revisions of the standard when necessary.

Signature of individual officer

(In ink)

(Kindly typewrite or print the following lines)

Name and title of above officer

Organization

(Fill in exactly as it should be listed)

Street address

City and State

¹ Please designate which group you represent by drawing lines through the other three. Please file separate acceptances for all subsidiary companies and affiliates which should be listed separately as acceptors. In the case of related interests, trade papers, colleges, etc., desiring to record their general approval, the words "in principle" should be added after the signature.

TO THE ACCEPTOR

The following statements answer the usual questions arising in connection with the acceptance and its significance:

1. *Enforcement.*—Commercial standards are commodity specifications voluntarily established by mutual consent of those concerned. They present a common basis of understanding between the producer, distributor, and consumer and should not be confused with any plan of governmental regulation or control. The United States Department of Commerce has no regulatory power in the enforcement of their provisions, but since they represent the will of the interested groups as a whole, their provisions through usage soon become established as trade customs, and are made effective through incorporation into sales contracts by means of labels, invoices and the like.

2. *The acceptor's responsibility.*—The purpose of commercial standards is to establish for specific commodities, nationally recognized grades or consumer criteria and the benefits therefrom will be measurable in direct proportion to their general recognition and actual use. Instances will occur when it may be necessary to deviate from the standard and the signing of an acceptance does not preclude such departures; however, such signature indicates an intention to follow the commercial standard where practicable, in the production, distribution, or consumption of the article in question.

3. *The Department's responsibility.*—The major function performed by the Department of Commerce in the voluntary establishment of commercial standards on a Nation-wide basis is fourfold: first, to act as an unbiased coordinator to bring all interested parties together for the mutually satisfactory adjustment of trade standards; second, to supply such assistance and advice as past experience with similar programs may suggest; third, to canvass and record the extent of acceptance and adherence to the standard on the part of producers, distributors, and users; and fourth, after acceptance, to publish and promulgate the standard for the information and guidance of buyers and sellers of the commodity.

4. *Announcement and promulgation.*—When the standard has been endorsed by a satisfactory majority of production or consumption in the absence of active, valid opposition, the success of the project is announced. If, however, in the opinion of the standing committee or the Department of Commerce, the support of any standard is inadequate, the right is reserved to withhold promulgation and publication.

ACCEPTORS

The organizations and individuals listed below have accepted this specification as their standard of practice in the production and distribution of tire repairs, vulcanized. Such endorsement does not signify that they may not find it necessary to deviate from the standard, nor that producers so listed guarantee all of their products in this field to conform with the requirements of this standard. Therefore, specific evidence of quality certification should be obtained where required.
